The Relationship between the Composition of Intestinal Flora and Dementia

Published On: July 31, 2024 | Pages: 001 - 004

Author(s): Joanna Michalina Jurek*

With the aging process of society, the incidence of dementia is increasing year by year and has become a common disease among the elderly which is prognosed to affect approximately 131 million individuals by 2050. The gut microbiome, as a diverse community of microorganisms, plays a crucial role in maintaining health and well-being. Recent research suggests that the g ...
